MAPS GROUP EXPANDS DATA ANALYSIS SOLUTIONS FOR THE SOUTH TYROL HEALTH AUTHORITY

The €450,000 contract runs for 24 months and introduces new features to help manage community care services and track prescriptions throughout their lifecycle

Parma, 05 november 2026,

Maps S.p.A. (MAPS; IT0005364333), a digital transformation company listed on Euronext Growth Milan, announces the expansion of its Data-Driven Governance solutions already in use at the South Tyrol Health Authority. The new features will support community care and enable the Authority to track prescriptions throughout their lifecycle. The contract has a total value of €450,000 and a term of 24 months.

The expansion will enable the Health Authority to extend the use of its Business Intelligence tools to additional areas of care, using the data available to plan services, monitor performance and guide decisions. The new features will support local Care Coordination Centers, which coordinate patient care across services. The solution will allow the centers to analyse how long it takes for care to begin, how patients transition to community care after hospital discharge and how individual care plans are updated. For Integrated Home Care Services, which provide ongoing care for people in their homes, the solution will enable the Authority to monitor geographic coverage, the frequency of home visits, the regularity of clinical reassessments and hospital admissions among patients receiving home care. Tracking prescriptions throughout their lifecycle will complement these features and provide a fuller view of each patient's care pathway.

Interactive dashboards and key indicators will allow users to view data by district, facility or geographic area, compare performance and track changes over time.

Marco Ciscato, Executive Chairman of Maps Group, said: *"The expansion of our solutions at the South Tyrol Health Authority demonstrates our ability to support our customers as their needs evolve. The modular design of our offering allows customers to extend its use over time, make better use of their existing data and gain access to new tools to guide their decisions. In community care, this gives those responsible for managing services a fuller view of patient pathways, helping them identify priorities and monitor continuity of care as patients move from hospital to home. This approach strengthens our customer relationships and supports the Group's organic growth."*
